JOURNAL EVALUATION PROCESS

The *Web of Science Core Collection*

- Our editorial decisions are conducted by our expert in-house editors
- They have no affiliations to publishing houses or research institutes
- No potential bias or conflict of interest
- Each editor is focused on specific subject categories
- Deep nuanced knowledge of the journals in their field
- Our rigorous process for the *Web of Science Core Collection* contrasts with that for other databases that rely on algorithmic approaches and/or delegating aspects of editorial decision-making to the research community.

The Web of Science Core Collection

At the heart of the *Web of Science* platform

The Web of Science Core Collection

Curated with care by an expert team of in-house *Web of Science* Editors

- We use a single set of 28 criteria to evaluate journals:
 - 24 **quality criteria** designed to select for editorial rigour and best practice at the journal level
 - 4 **impact criteria** designed to select the most influential journals in their respective fields using citation activity as a primary indicator of impact
- Journals that meet the quality criteria enter ESCI in the *Web of Science Core Collection*
- Journals that meet the additional impact criteria enter SCIE, SSCI or AHCI depending on their subject area
- These are dynamic collections subject to continuous curation to ensure journals are in the appropriate collection
- ESCI journals that gain impact move to SCIE, SSCI or AHCI
- SCIE, SSCI and AHCI journals that decrease in impact move to ESCI
- **Any journal that fails to meet all 24 quality criteria will be removed from the *Web of Science Core Collection***
