What is author disambiguation?

Name ambiguity is a frequently encountered problem in the scholarly community:

- Different researchers publish under the same name
- Individual researchers publish under many names
- Languages and cultural naming conventions introduce additional challenges

Author disambiguation is a process that aims to find all publications that belong to a given author and distinguish them from publications of other authors who share the same name.

Author Search

In the **Web of Science Core Collection** search page, use the **Author search** tab to find author records for any author indexed in Web of Science Core Collection.

The screenshot shows the Web of Science search interface. At the top, there are navigation links for 'Web of Science', 'Search', 'Marked List', 'History', and 'Alerts'. On the right, there are language and user settings: 'English', 'Adriana', and the 'Web of Science Group' logo. A banner image of a library with the text 'Working together to research confidently' and 'Search the largest network of curated research in the world.' is visible. Below the banner, a search bar is set to 'Web of Science Core Collection'. There are three tabs: 'DOCUMENTS', 'AUTHORS', and 'CITED REFERENCES', with 'AUTHORS' selected. A descriptive text explains that an author record is a set of documents likely authored by the same person. A search input field contains 'Name Search'. Below it, a dropdown menu is open, showing 'Name Search' (highlighted) and 'Author Identifiers'. To the right of the dropdown, there is a 'Name Search' label and a description: 'Finds an author record by searching for the author's first and last names.' A 'SEARCH' button is located at the bottom right of the search area.

An **author record** is a collection of publications we have determined to be written by the same person, even if they share their name with many other researchers.

- Author records give an **overview** of the researcher's affiliation history, published names, publications, citation metrics, co-authors, and author position summary.
- **Researchers can claim their publications** to create or link to a public researcher profile, enabling them to correct and capture their publication output and showcase it alongside their other academic contributions, such as peer reviews, editorships, and grant reviews.

Author Records

The screenshot shows an author record for Tiago Barros. It includes a profile picture, a 'VIEW PUBLIC PROFILE' button, and a 'Verify your Author Record' section with a 'GO TO AUTHOR SEARCH' button. The 'About' section lists published names and organizations. The 'Author Metrics' section shows a citation network with 15 H-index and 21 total publications, and 1,034 sum of times cited and 897 citing articles. The 'Author Position' section shows a bar chart: First Author (17%), Last Author (25%), and Corresponding Author (11%). The 'Author Network' section lists top co-authors: Kuriyan, John (8), Drew, Andreas (5), Kuehli, Werner (4), Wachveitl, Josef (4), and Amarie, Serpiu (4). The 'Publications' section shows 21 publications from the Web of Science Core Collection, with a 'VIEW AS SET OF RESULTS' button and a date filter set to 'Newest first'. Two publications are highlighted: one from NATURE (4 times cited) and one from ELIFE (34 times cited).

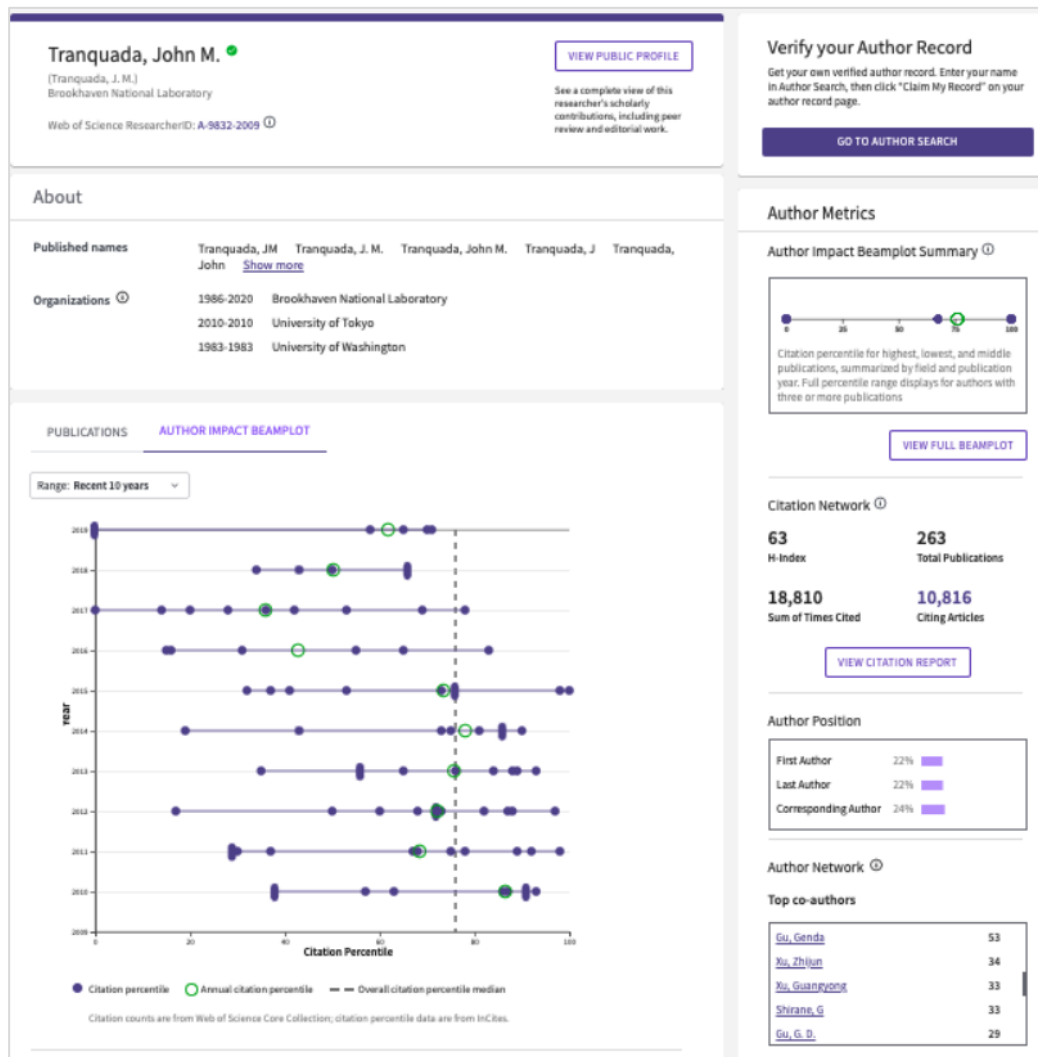

New features

- Bulk remove publications by institution when submitting a curation.
- Direct link to the Citation Report from the Author Record pages.
- Author Network box on claimed profiles showing common collaborators with that researcher.
- Analysis of how often authors are in first, last or reprint author position.
- Stable URLs for claimed records, enabling closer integration between a researcher's private Publons dashboard and their WoS Author Record.
- Claimed status display to Author Search results pages.

Future plans

- Beamplots on WoS Author Records and Publons, showing a graphical representation of the relative citation performance of each article in the record.
- Seamless integration with Publons to turn ORCID imports and WoS article level exports into publication claims in Author Records.
- Closer integration with Analyse Results.
- The ingestion of bulk feedback datasets.

Author Impact Beamplot

Beamplots are graphical representations of the citation performance of a researcher's publications.

Beamplots use normalized citation percentiles as a means of comparing the citation performance of publications. This allows you to:

- ✓ View article performance in appropriate context
- ✓ See performance change over time

WHITE PAPER

Interpreting the citation performance of individual researchers with beamplots >

Author Impact Beamplot

PERCENTILES

Normalized citation percentile value is determined by comparing the citations for an individual paper to the citation counts for all publications in the same year, subject category and of the same document type, then determining the percentage of papers at each level of citation.

In Web of Science, a higher percentile value means better performance. If a paper has a percentile of value of 99, then it is in the top 1% of most cited publications of the same document type, year and subject category. A percentile indicates how a paper has performed relative to its peers, and so, is a normalized indicator.

VIDEO [Author Impact Beamplots >](#)

Author Impact Beamplot

THINGS TO KNOW

- Percentile values are sourced from *InCites Benchmarking & Analytics*.
- Beamplots only include publications with the Web of Science document type *Article* or *Review*.
- Percentiles are calculated for publications back to 1980. Current and previous year publications are excluded from the beamplot.
- Publications may be assigned more than one subject category. The category displayed is the highest performing.

Author Impact Beamplot Summary ⓘ

Percentile range displays for authors from 1980 to 2019. View all publications in full beamplot.

Details Are Static

Metrics Are Dynamic

Author Impact Beamplot | Percentile Calculation

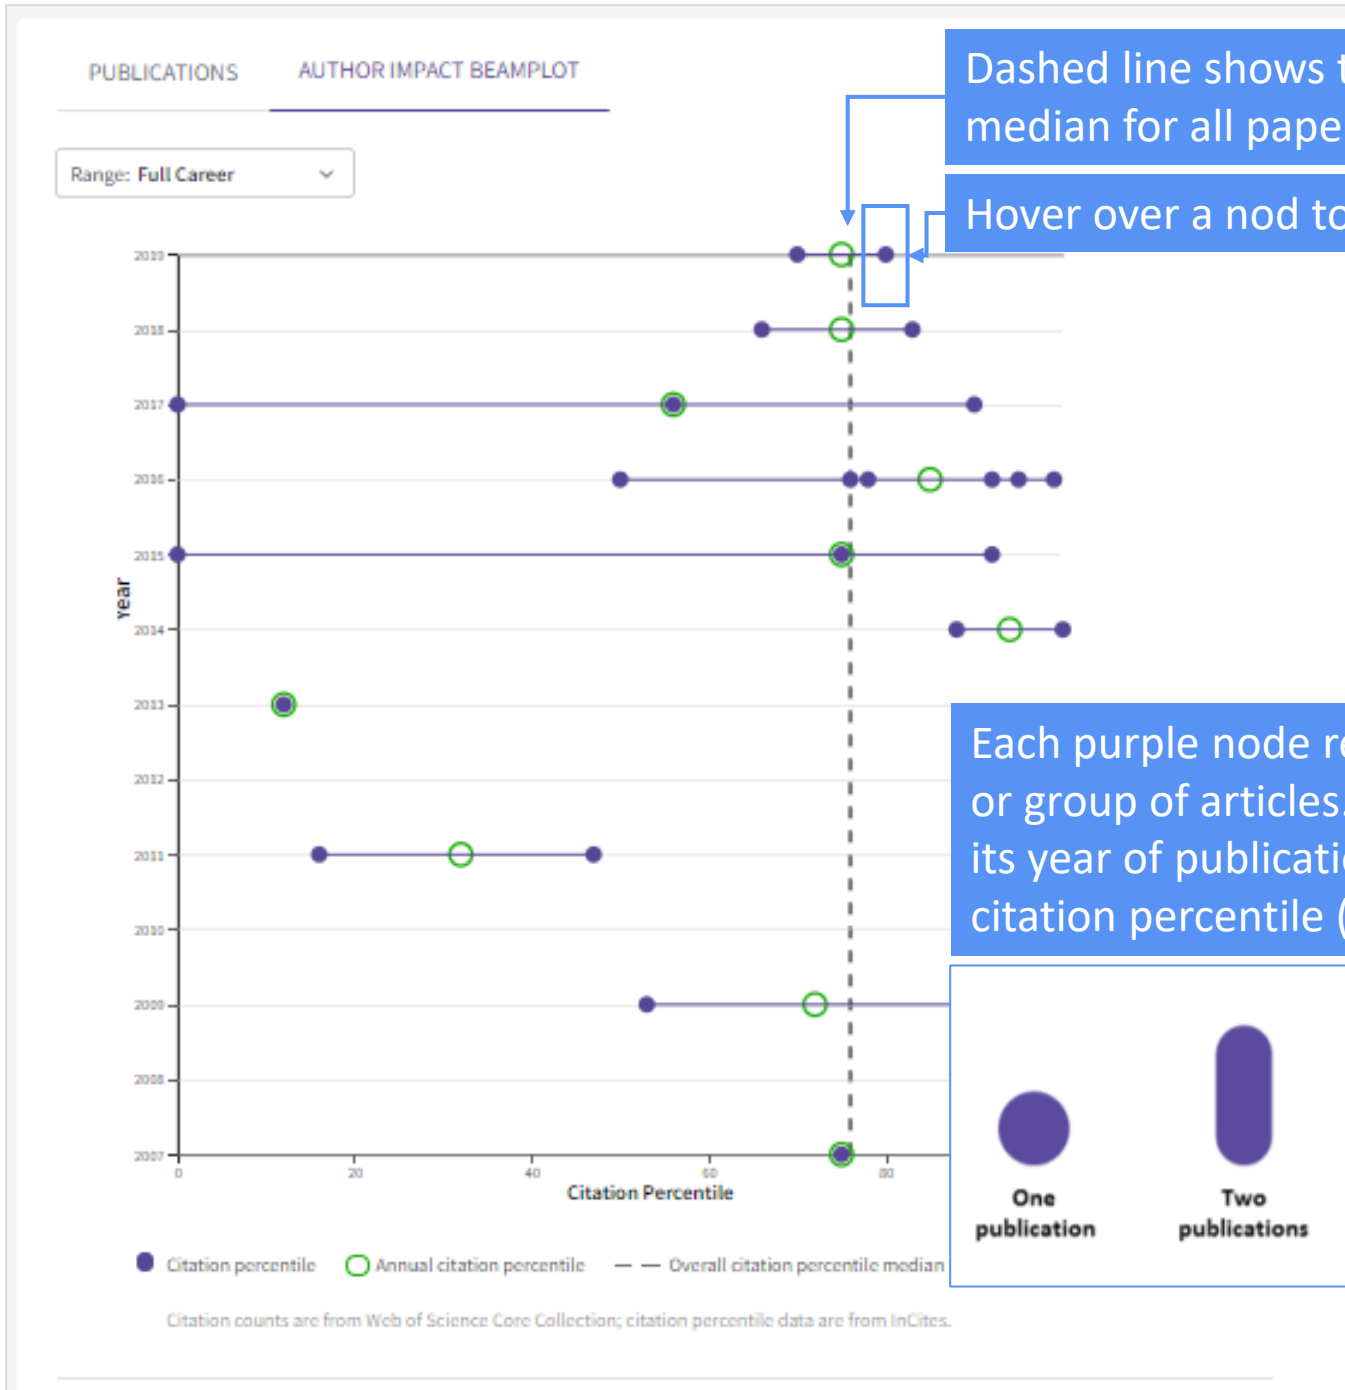

Each document is compared to their YEAR and CATEGORY of publication. Using this comparison, they are each given a set of normalised metrics.

A Beamplot allows one to visualise in a single figure the normalised percentile of every document a researcher has produced over the course of their career.

All documents globally published in 2009 in the Field of Research of Psychology. In 2009 a total of 20,004 publications were produced in Psychology with an average number of 29.3 citations.

Author Impact Beamplot Author Profiles

Dashed line shows the overall percentile median for all papers on the beamplot

Hover over a nod to see article details.

Each purple node represents an article or group of articles. Its position shows its year of publication (y-axis) and its citation percentile (x-axis).

Legend for publication counts:

- One publication (Small purple circle)
- Two publications (Medium purple oval)
- Three or more publications (Large purple oval)
- Annual percentile median (Green circle)

Publons

Your publications, citation metrics, peer reviews, and journal editing work in one, easy-to-maintain profile

- ✓ **Create a profile** or browse Publons for **free at publons.com**.
- ✓ **Import publications** from Web of Science, ORCID, or your bibliographic reference manager (e.g. EndNote or Mendeley)
- ✓ **View trusted citation metrics**, automatically imported from the Web of Science Core Collection
- ✓ Build and **display your verified peer review and journal editing history**, powered by partnerships with thousands of scholarly journals
- ✓ **Download a record summarizing your scholarly impact** as an author, editor, and peer reviewer.
