

# REPORT | The Annual G20 Scorecard - Research Performance 2021

The G20 economies are a leading force in the global research system. Together, they represent more than 80% of Gross Domestic Product (GDP) and two-thirds of the global population. This annual report from the Institute for Scientific Information (ISI)<sup>™</sup>, released ahead of the G20 Summit, gives a visual comparative snapshot for each of the 19 member nations of the G20 (the EU is the 20th member), covering a wide range of research performance metrics.

Special analysis in this year's report focuses on the relationship between G20 nations' research responses to COVID-19 and the research subject diversity of their portfolios. It finds that regions with more even research bases tend to support a response across a wider range of COVID-19 topics, while those with less even research bases tend toward a more specialized response.

# REPORT | An introduction to global university rankings

- Globalization of science is becoming increasingly prominent, and the number of nodes and ties in the network has substantially increased over time. The traditional science powerhouses have occupied central positions in the network, while the new emergent scientific countries are rising, both driving the evolution of world order.
- Ranking systems have become a standard feature in higher education systems and are increasingly accepted as an instrument to inform and guide evaluation and planning decisions at a global, national, institutional and individual level.

In this report, we discuss the rise in significance of global university rankings, the history of these rankings, and provide some context to better understand some of the major ranking systems.

<https://clarivate.com/lp/an-introduction-to-global-university-rankings/>

# Influence of ranking systems on the universities ecosystem

## STUDENTS

Reputation derived from league tables/rankings is a critical determinant for student applicants, especially for international students

## GOVERNMENT & FUNDING AGENCIES

Government and funding agencies are more favorably disposed to highly ranked universities

## EMPLOYERS

Employers often seek out and prioritize candidates from the most highly respected universities

## COLLABORATIONS

Organizations and institutions use rankings as a benchmark when seeking out collaboration partners

## UNIVERSITIES & LEADERSHIP

University leadership can see the impact directly in the form of quality and number of students enrolled, which in turn affect their budget

# Understanding the rankings

Research related indicators	Patent related indicators	Other indicators	
Number of publications in indexed journals	Staff-to-student ratio	Citations per faculty	Number of published books
Industry article citation impact	Number of conference proceedings	Avg. number of times a journal has been cited by patents	University income
Doctorate to Bachelor students ratio	Number of Highly Cited Researchers™	Number of publications cited in Science / Nature	Number / percentage of publications with international co-authors
Number / ratio of 1% most cited publications	Number of basic patents filed by the organization	Proportion of international students	Number of citations
Percentage of articles that contain one or more industrial co-authors	Citations per faculty	Number / percentage of 10% most cited publications	Student reputation among companies
Percentage of patents cited	Proportion of international staff	Reputation among colleagues / students	Average number of citations
Reputation among research peers (regional / international)	Quantity and quality of research grants	Research income from industry	Percentage of academic staff possessing a doctorate degree
Staff / alumni with Nobel prizes or the Fields medal	Ratio of patent applications to grants over the assessed timeframe	Percentage of patents sought with the U.S., European and Japanese patent offices	Total number of times a patent has been cited by other patents

University rankings are based on a range of different factors, and different ranking systems use different indicators and different weights.

# A strategy framework to help you boost ranking

1	Assessment	 Assess your university performance with measurable ranking indicators (research bibliometric indicators, teaching indicators, etc.)
2	Benchmarking	 Benchmark against peers
3	Setting Goals	 Setting achievable goals in a certain timeframe
4	Goals Alignment	 Align goals with university context and global strategy
5	Setting Targets	 Set targets to reach the goals
6	Defining Initiatives	 Identify initiatives to reach targets
7	KPIs	 Define KPIs on goal, target and initiative levels
8	Plan	 Derive an implementation plan
9	Governance	 Define a project governance structure

# A strategy framework to help you boost ranking

## INDICATORS

### **What do scientific indicators mean?**

Understand the “true” meaning of scientific indicators in different ranking systems

## IMPACT

### **What is their impact?**

Understand the impact of scientific indicators in different ranking systems and determine indicators having the highest impact in one or more ranking system

## RELEVANCY

### **Which indicators should my university boost?**

Determine indicators most relevant to your university in alignment with the global institute strategy and circumstances

# A strategy framework to help you boost ranking

## ASSESS

### **Where am I currently standing?**

Determine what is our current position in the chosen indicators using corresponding assessment tools and benchmark with other universities

## SET GOALS

### **What are my goals?**

For each chosen indicator determine a goal to reach in a certain period of time

## ESTABLISH INITIATIVES

### **Which initiatives will get me there?**

Establish a set of initiatives, measures and projects for each goal

## PLAN

### **How will I get there?**

Derive an implementation plan and governance. Follow your determined performance indicators closely and adjust plan, initiatives or goals with changing circumstances

# Ensuring that your data is considered correctly by ranking systems

## SINGLE POINT OF CONTACT

Assign a single point of contact that communicates with the ranking systems that gather the requirements, deadlines and submission of data

## DATA GOVERNANCE

Assign a committee that gathers the required data and ensures a timely submission

## BUILD BUY IN

Build and maintain buy in across the university will ensure that data collection is smooth and there's no miscommunication about what the rankings mean and why you're doing it

## DATA CONSISTENCY

Ensure affiliation consistency when publishing documents (one name of the university)

## GOVERNMENTAL DATA CORRECTNESS

Ensure data is up to date and correctly submitted to governmental bodies.

# Use case: ShanghaiRanking

# University Rankings using Clarivate data

- Our data is editorially selective, publisher neutral, and has been consistently structured since 1950.
- Complete cover-to-cover indexing and citation connections give you certainty that you are making the best decisions wherever you are in the workflow.

## Address information

## Affiliation

Some rankings use the *Corresponding Address* while others use our *Organization Enhanced (Affiliation)* profiles.

FINANCIAL TIMES

# Academic Ranking of World Universities (ARWU)

- Starting 2003, ARWU has been presenting the world top universities annually based on a set of objective indicators and third-party data.
- More than 2000 universities are ranked by ARWU every year and the **best 1000 universities** are published.

## 2021 Academic Ranking of World Universities 2021

The Academic Ranking of World Universities (ARWU) was first published in June 2003 by the Center for World-Class Universities (CWCU), Graduate School of Education (formerly the Institute of Higher Education) of Shanghai Jiao Tong University, China, and updated on an annual basis.

## ADDRESS

- Each Web of Science record has a *Corresponding Address*.
- When several authors collaborate on a publication, *all addresses are captured* and recorded in the *Addresses* field.
- The address segments are delimited by commas.
- Depending on the methodology, the order of appearance of organizations can have an impact on the results of rankings that use raw data. Therefore, it is important to establish a common signature policy and to monitor it to ensure that it is used properly.

**HiCi** | The number of Highly Cited Researchers selected by Clarivate Analytics. The Highly Cited Researchers list issued in November 2020 was used for the calculation of HiCi indicator in ARWU 2021.

*Only the primary affiliations of Highly Cited Researchers are considered.*

Use Web of Science and InCites to monitor the number of Highly Cited papers your institution is producing.

# Global Ranking of Academic Subjects (GRAS)

In ShanghaiRanking's Global Ranking of Academic Subjects 2021, institutions are ranked in 54 subjects across Natural Sciences, Engineering, Life Sciences, Medical Sciences, and Social Sciences.

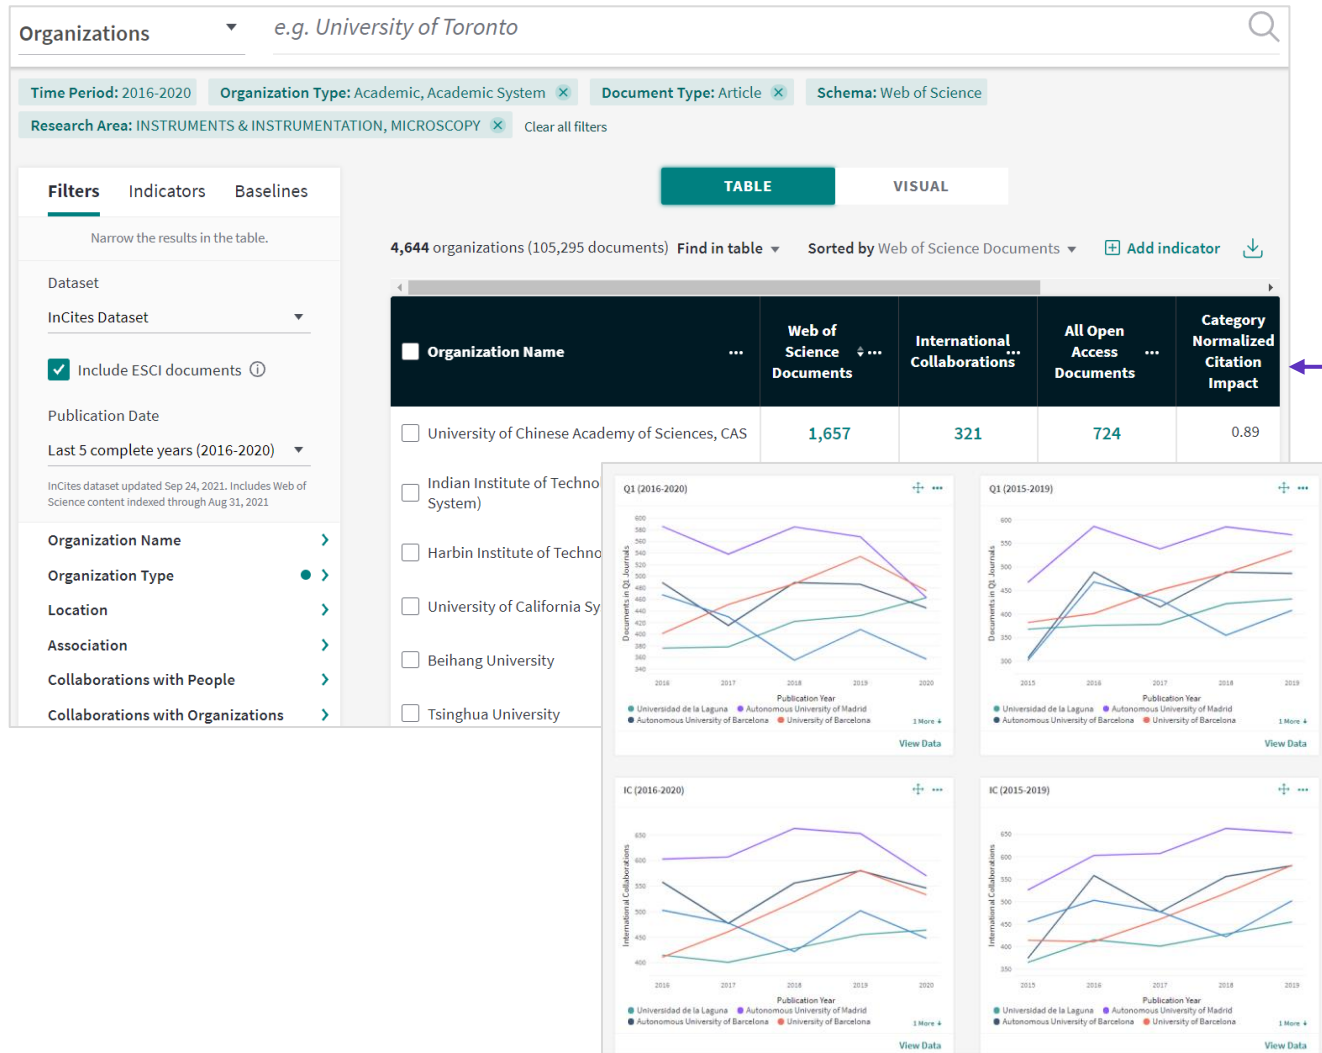

The Global Ranking of Academic Subjects has scrutinised the universities that have published a certain number of publications during the period of 2015-2019. The publication threshold is set differently for different subjects. Bibliometric data are collected from Web of Science and InCites.
